

### Introducing the Activity Log Tool

Monitoring user activity in Encompass® is critical for both security and troubleshooting, but accessing that information can be time-consuming and complex. Without a

built-in way to track IP addresses, usernames, or system access patterns, administrators often spend hours pulling data manually. The Activity Log plugin from Lender Toolkit's PowerTools™ simplifies this task with a user-friendly, exportable solution.

## ACTIVITY LOG TOOL

### KEY BENEFITS:

#### Track Loan Access

View loan open and close activity alongside key details like UserID, IP address, Computer Name, and Loan Folder—all in one place for easy review.

#### Export to Excel

Export logs directly to Excel to simplify analysis, support audits, or maintain internal records without the need for manual copy-paste tasks.

#### Search with Ease

Quickly locate specific events or users with built-in search functionality, helping administrators diagnose issues or monitor access patterns more efficiently.
